

## Intro:

If you love our demo slideshows on our website you will love your slideshow because it is exactly the same thing but your images. It is pretty much the perfect medium to show off your images anywhere and anytime – as a slideshow for fun and/or to find and display individual images or one at a time manually as well.

## How to get us the images for your Online Slideshow:

On your desktop create a folder named with the date of your wedding and your (first) names. This is important as that will be the heading on your slideshow.

Please make a selection of not over 135 images – it cannot be over that to play on the iphone and that is a perfect number of images for a fun sideshow anyway.

From your collection of 8x10 files drag and drop the selection you want on your slideshow into this folder. Don't change the numbering or the file names in any way. We have to show them in the numerical order they are naturally in and with the names we gave them – we can't change the order of the presentation unless we charge for that.

Burn that folder onto a CD or DVD and send it to us here at our office. You can also use the ReWritable DVD we are now including with the 8x10 images. You can simply drag your slideshow folder into the folder named "Drop Your Slideshow Folder Here" on that ReWritable DVD. Or burn it to a flash drive and bring that by – that is fine also. We'll be happy to see you.

Finally, do be patient but you are welcome to send an email to us if three weeks go by and you don't see the slideshow. We will try and get them up within a couple weeks. If you do the above it is really easy for us to do this. It is in our interest to get them up quickly for you to share and enjoy - thereby helping us with exposure. We are proud of the quality of our work and want it shown around and enjoyed as much as possible.

We will send you an email link to the slideshow and you can forward that link to anyone you wish to - post it on your facebook "Wall" and all your facebook friends will have access and love it. Create bookmarks to the site on your various computerized mediums. You can view this slideshow virtually anywhere at any time on most any computerized medium – all you need is a smartphone to share the images anywhere, but any tablet or pc will show off the images even better.
